# Mikhail Strutinsky

Senior Fullstack Developer

## 👤 Profile

I have more then 13 years of experience in IT industry. During this time have been working on several commercial projects. I have expert knowledge of .NET technologies as well as math skills and programming concepts. I familiar with different languages, concepts & technologies.

I like good team, people. Quick-learning person and never stop with self-improving.

PhD In Physics, specialization - "Physics of devices of elements and systems"

Thesis work: "Inverse problems of thermoelectricity".

## 💼 Employment History

### Scientist & Researcher  at  Thermoelectricity Institute, Chernovtsi

December 2005 — January 2011

Researching & investigation. Developing special program products, modeling.

Worked on developing automobile thermoelectric generators, coolers & sensors.

Investigated Inverse problems of mathematical physics.

PhD In Physics, specialization - "Physics of devices of elements and systems"

Thesis work: "Inverse problems of thermoelectricity"

### Software Developer  at  Verint, Chernovtsi

February 2011 — November 2015

Vovici/Verint

EFM   – (Enterprise Feedback Management) - enterprise   survey and feedback response management solution for actively managing   customer and employee feedback programs. Designed for business users, Verint   EFM includes multichannel surveying for capturing customer input across web,   telephone, email, and mobile channels. EFM is solution for creating surveys   using built-in templates or the solution's flexible survey editor. Customers   can deploy, access, and retrieve surveys on a range of mobile devices. There   is opportunity to deploy surveys offline or by using the web app, SMS, or a   self-service kiosk.

C#, Asp.Net Web Forms, AJAX, JavaScript/Telerik Ajax, HTML, CSS, Perforce, TeamCity, SQL, MS SQL SERVER, Telerik automation framework

### Software Developer at USA customer, hidden due to NDA, Chernovtsi

November 2013 — April 2015

Social Network (SN) – startup project that gives opportunity for customers create their own channels. Channels are entities consisting of various multimedia info – images, galleries, videos, audios. Each user with their own channels are integrated with other social network. There is API for using SN for integration with mobile apps, and other applications.

At least SN – is something in between Youtube, Twitter and Facebook.

Tech Stack: .NET/C#, Asp.NET MVC, knockoutjs, oyala service intergration, RabbitMQ, TSQL/SQL Server

### Software Developer at UK, Chernovtsi

November 2015 — June 2020

Whats App custom clients, Surveys designer

### .Net Developer at Truven health analytics, Chernovtsi

June 2016 — October 2016

Health analytics data management

### Fullstack Developer at Presence Orb Analytics, Chernovtsi

September 2016 — May 2017

WiFi analytics for Retail, Advertising & Hospitality

### Developer at Seogenie, Chernovtsi

May 2017 — December 2017

SEO automatic service for customer's sites

### Fullstack Developer at iLily startup, Chernovtsi

May 2018 — January 2021

Booking Software startup based on microservices Architecture.

EKS cluster within about 25 .NET services and MS Sql Server & Mongodb instances.

### Fullstack Developer at Tailornova, Chernovtsi

February 2021 — October 2021

Developed microservices with aws infrastructure. Continue developing
custom CAD system for design dress with 3d mannequins. Developed Adobe illustrator scripts for automation work of designers.

Tech stack: aws (dynamo db, ecs, sqs, others), .NET, angular/typescript,
vue js

### Fullstack Developer at Intetics, Chernovtsi

November 2021 — November 2022

Responsibilities - developing microservices related healthcare area (call center).
Developed System for reporting & tracking employee activity on their
